

The right way to load bulk bags: right on time, right on delivery and right on budget.

The LOADRIGHT® bulk bag freight system (referred to as a LOADRIGHT® pallet) was developed to reduce the cost of distributing product in bulk bags to customers, especially export markets. It is ideal for shipping many bulk bag products, for example milk powder, sugar, petro-chemicals and plastics.

- Cost effective
- Easily handled – lighter than a wooden pallet.
- Easily recyclable – once finished with, the LOADRIGHT® pallets can be placed in the paperboard recycling bin.
- Space efficient
 - › Inwards goods – can be delivered layflat or nested.
 - › Outwards goods – container fill.

- One way product that requires no cleaning and fumigation before use.

The basis of the LOADRIGHT® pallet is a diecut corrugated sheet with two half round cores inserted into it to form a pallet. The pallet is loaded with the corrugated sheet flat on the ground. The bulk bag forms around the two cores leaving space for the forklift tines to lift and move the pallet.

Technical Specifications

- Footprint size:** 1100 x 1070mm
- Product components:** Corrugated diecut sheet and two half-round core inserts.
- Container fit:** Efficient container utilisation.
- Other features:** Lightweight and disposable.

The solution centre is Carter Holt Harvey Packaging's centre of excellence. It plays a vital role when it comes to the process of developing new products or re-engineering current solutions.

The Solution Centre gives customers the opportunity to spend time with a dedicated team of specialists through the use of appropriately structured teams.

These teams are virtual and cross functional including customer representation to ensure the best result for our customers at all times. From structural design to packaging

systems and pre-press, we have the know how to take your business to the next level.
