

Protect your product and keep it easily accessible at the same time.

By including the easy tear perforated tab into your RSC (Regular Slotted Case) it can be opened as easy as 1...2...3...

The easy tear device is designed to eliminate the need for a knife and provide an easy, safe way to open a taped RSC.

- Eliminates the potential of having cut product inside
- Benefits health and safety for your customer
- The case maintains its integrity.

The easy tear device is a tear tab that has been designed to maintain the integrity of the case whilst remaining unobtrusive to the print on your case.

1. Push the tab in at the bottom of the perforation.

2. Tear the perforated strip upwards.

3. Pull the perforated strip and tape back along the top of the case and away.

Variations of the tear tab can be investigated to suit your specific needs. Talk to your CHH Account Manager on how this can work for your business.

The solution centre is Carter Holt Harvey Packaging's centre of excellence. It plays a vital role when it comes to the process of developing new products or re-engineering current solutions.

The Solution Centre gives customers the opportunity to spend time with a dedicated team of specialists through the use of appropriately structured teams.

These teams are virtual and cross functional including customer representation to ensure the best result for our customers at all times. From structural design to packaging

systems and pre-press, we have the know how to take your business to the next level.
